ATLAS and SWIFIX

EXTERNAL WALL INSULATION FIXINGS

ATLAS stands for quality, innovation, durability and aesthetic appeal.

With more than 30 years' experience in the building chemicals and raw materials industry, ATLAS is able to provide the highest quality materials to meet the requirements of installers and end users.

Atlas external wall insulation systems act as a thermal envelope surrounding the property; if gaps are made in the envelope, thermal bridging can occur.

Swifix fixings help to keep the thermal envelope intact, thus maintaining the insulation surface.

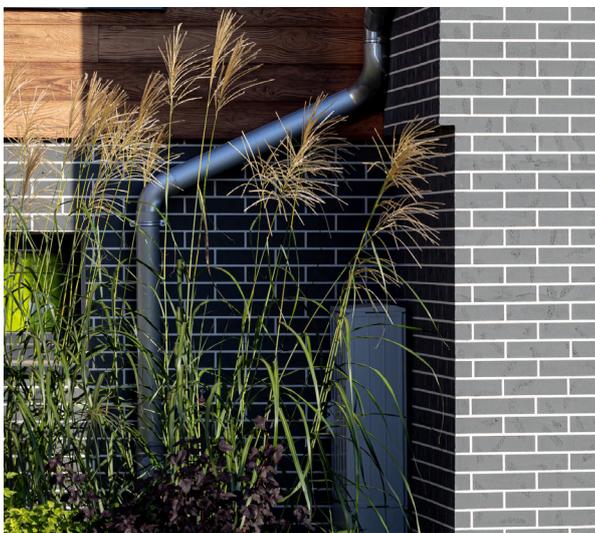

Made from high quality plastics, they are cost-effective, quick to install and offer the security of a guarantee.

These fittings have been specifically designed and engineered for refitting and installing items through external wall insulation (EWI).

SWIFIX fixings:

- Tested by the British Research Establishment (BRE) for strength, compression and load.
- Fittings reduce the risk of water penetration into external wall insulation preventing damage.
- Thermally efficiency of the building is maintained as fittings avoid cold spots.
- Fitting have been tested to secure weights up to 100 kg.
- Product will continue to perform as required, ensuring all system guarantees.
- Fully compliant government programmes retrofitting requirements.

SWIFIX products
are suitable for use with
all **ATLAS INSULATION
SYSTEMS:**

EPS ▪ XPS ▪ Mineral Wool

**ATLAS
APPROVED
SWIFX**

Use it for:

**satellite dishes ▪ waste pipes ▪ fence/gate posts ▪ down pipes
alarms ▪ hanging baskets ▪ lighting**
